Paper Discussion [3]

A Glimpse at interesting social network theory

“Serendipity”

# *Background*

- 
- Karl Marx (Philosopher, 1818-1883)

***“People are the sum total of societal relationships.”***

# Background

Social Ties (in **real world**) <-->

Social Ties in Digital Platform (in **digital world**)

## Diverse types of social ties:

Familys/friendships/colleague/celebrity&fan.

Family/Friends -> Instagram/Facebook/What's App

Colleagues -> LinkedIn; Celebrity&Fan -> Tiktok, YTB,X

# Categorization: Ties

## *From societal perspectives:*

Family ties,  
friendship ties,  
professional ties (colleagues)  
community ties,  
...

## *From mathematical(graph) perspectives:*

tie strength (edge weight)  
multi-ties (multi edges between two nodes)  
...

# Categorization: Social Media

\*Categorized by **key features** within social media app.

- Today, we focus on social media **with networking purpose.**
- **For example:** Facebook, whatsapp, messengers, LinkedIn (professional relationships), etc.

*However, in realworld,  
social ties in social media platform is  
**a mix of** different types !*

# *Two Case Studies*

# Case Study 1: Facebook & Messenger

## ***Social Ties:***

family, friends, community

***Platform:*** Mobile(✓), Web, public or private?

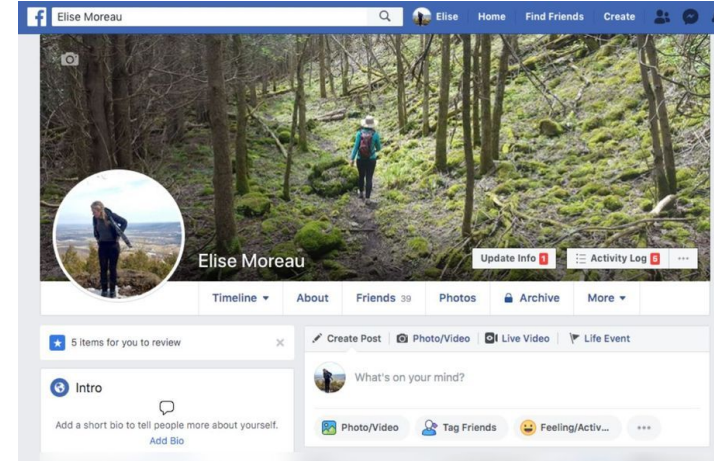

## ***Key Features in Social Media:***

profile, friends, groups

news feed, timeline

marketplace,

messenger ~

# Case Study 2: WhatsApp

## ***Social Ties:***

family, friends

***Platform:*** Mobile(✓), Web

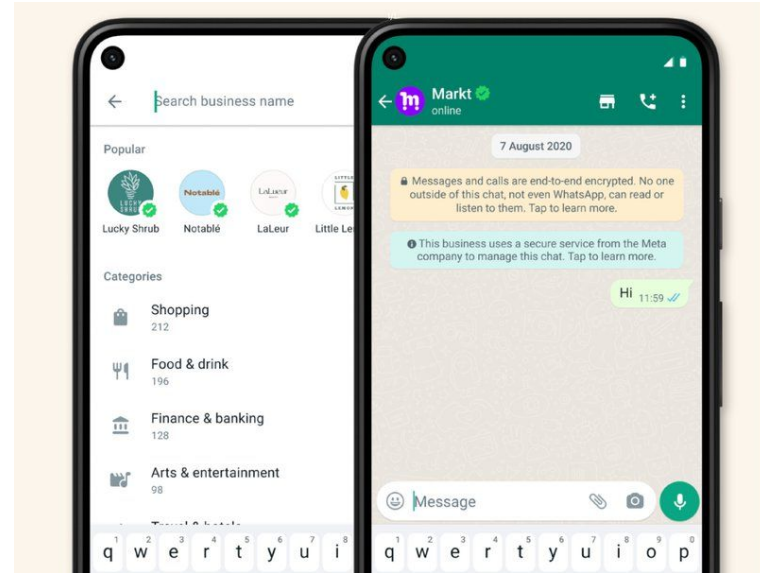

## ***Key Features in Social Media:***

Messaging, voice & video call, group chat

End-to-end encryption,

customization options

...

# Case Study 3: LinkedIn

## Social Ties:

professional relations

**Platform:** Mobile(✓), Web

## Key Features in Social Media:

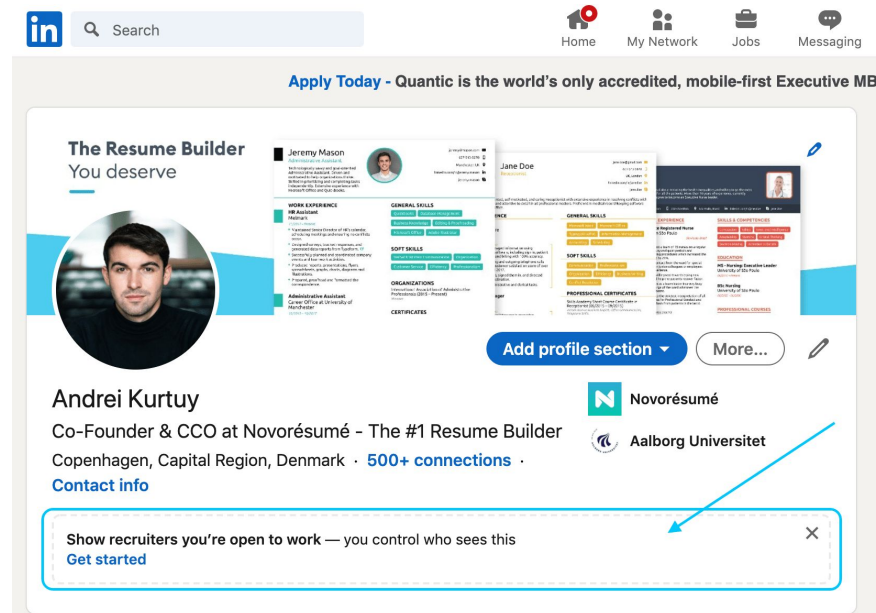

profile, connection, groups

feed,

jobs, events, company pages

messaging

...

# *Existing Issues*

# Why to explore “social ties in social media” is important ?

## *For society/individual*

- Understand how **online interactions** influence **social dynamics and relationships**.
- Explore the impact of social media on **mental health and well-being**.
- Analyze **social network structures and information flow** within online communities.
- Investigate how social ties **shape attitudes, behaviors, and engagement online**.

## *For platform:*

- Foster community building and engagement on **social media platforms**.
- Address ethical considerations related to **privacy, consent, and data protection** in social media research.

# ***Paper Discussion***

# Paper list

*\*in chronological order & scope top-down*

---

**Paper 1:**CACM 15' - Internet Use and Psychological Well-Being:

Effects of Activity and Audience

**Keywords:** *Internet use, well-being*

**Paper 2:**CHI 09' - Predicting Tie Strength With Social Media

**Key words:** *tie strength, prediction model, complementary interviews*

**Paper 3:**CHI 17' - “WhatsApp is for family; Messenger is for friends”: Communication Places in App Ecosystems

**Key words:** *communication place, apps*

# *Paper 1*

# Paper 1:

## Internet Use and Psychological Well-Being: Effects of Activity & Audience

---

**Problem:** How does internet use influence psychological well-being ?

**Implications:**

- Talking with **close friends online** is linked to improvements in social support, depression, and other measures of well-being, but **talking with strangers** and reading about acquaintances are not.
- Readers should be skeptical of **crosssectional and survey-based studies** linking well-being to Internet use. Instead, experiments or **longitudinal designs** pairing surveys with log data provide more reliable insights.
- **Human agency** is key: The effect of technology on our lives depends on **how we use it, what we talk about, and whom we talk to.**

*Zooming in :)*

# P1-Discussion1

***Let's discuss:*** *what's the difference  
between **strong ties and weak ties** ?  
(definition, examples)  
how to **quantify** strong or weak ties ?*

# P1-Discussion1

## Strong ties

### Definitions:

- refer to close, intimate, and emotionally significant relationships between individuals.
- involve frequent interaction, mutual trust, and deep emotional bonds.

### Examples:

- include close friends, family members, romantic partners, and colleagues with whom one has strong emotional and social connections.

### Valuable:

- provide **emotional support, practical assistance, and a sense of belonging**, but they may also limit exposure to new information and opportunities due to their close-knit nature.

## Weak ties

### Definitions:

- refer to more casual, distant, and less emotionally intense relationships between individuals.
- involve occasional interaction, limited mutual trust, and weaker emotional bonds compared to strong ties.

### Examples:

- include distant relatives, former classmates, and colleagues with whom one has limited interaction or shared experiences.

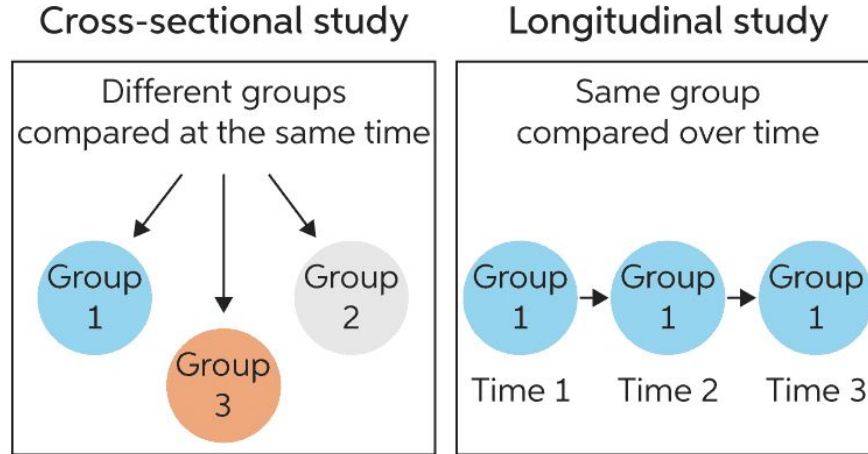

### Valuable:

- providing access to **new information, resources, and opportunities outside one's immediate social circle**. They facilitate the flow of novel ideas, job opportunities, and diverse perspectives.

# P1-Discussion2

***Let's discuss:*** *what's the difference between crosssectional and longitudinal design ?*

# P1-Discussion2

***Let's discuss:*** So in paper-1 problem,  
*which study type* is more suitable & why?  
(e.g. data accessibility, logic)

# P1-Discussion3

***Let's discuss:***

*how to narrow down **the scope** of Internet use ?*  
*how to **quantify** the psychological well-being level?*

# P1-Discussion3

- **Use frequency:** heavy use vs. light use
- **Different purposes:**  
communicating with friends and family; communicating in online groups and to meet people; retrieving and using information; seeking entertainment or escape; shopping; and acquiring health information or talking about health.
- **Temporal:** change over time.

# *Paper 2*

## Paper 2:

### Predicting Tie Strength With Social Media

---

**Problem:** Social media treats all users the same(trusted friend vs. total stranger).

**While** in reality, relationships fall everywhere along this spectrum.

**Solution:** Tie strength prediction model + Error analysis interview(model limitations)

# P2-Definition fo “Tie Strength”

**Tie strength:** The strength of a tie is a (probably linear) combination of the amount of time, the emotional intensity, the intimacy (mutual confiding), and the reciprocal services which characterize the tie.

**Dimensions:** Granovetter proposed four tie strength dimensions: amount of time, intimacy, intensity and reciprocal services. Subsequent research has expanded the list. Ronald Burt proposed that structural factors shape tie strength, factors like network topology and informal social circles.

# P2-Implications

## *Implications:*

- **Tie strength dimensions:** [1]different dimensions contribute to strength differently (e.g. intimacy contributes most). [2]some variables are hard to quantify(e.g. emotional support).
- **Practical implications:** apply tie strength modeling in social media(e.g. privacy control, media type, adapts with time).
- **Theoretical implications:** more variance to understand(e.g. Do we miss some important signal/predictor? Continuous or discrete value ? Properties of the link ?)

## P2-Discussion1

***Let's discuss: what's the limitation for this paper ?***

# ***Paper 3***

# Paper 3:

“WhatsApp is for family; Messenger is for friends”:  
Communication Places in App Ecosystems

---

**Problem:** How & Why users distribute their contacts within their **app ecosystem**?

**Implications:**

- Key factor: **contact within app** -> conversation, communication patterns, quality of relationship.
- Apps: **features and technical constraints** of apps guide the users with membership rules, perceived purposes, and emotional connotations.
- Users: shift the boundaries of their communication places to accommodate changes in their contacts' behaviour, the dynamics of their relationships, and the restrictions of the technology.

## P3-Discussion1

***Let's discuss:***

*We argue that communication apps should support creating multiple communication places within the same app, **relocating conversations across apps, and accessing functionality from other apps.***

*Agree or disagree?*

*A Glimpse at  
“interesting”  
social network theory*

# Have fun : )

- **Small world theory:** refers to the idea that social networks are characterized by short paths or chains of connections between individuals. In a small world network, most people can be reached through a relatively small number of intermediaries, commonly referred to as "**six degrees of separation.**"
- **Strengths of weak ties:** suggests that weak ties (i.e., casual acquaintances) are often more valuable for accessing new information and opportunities than strong ties (i.e., close friends). Weak ties **provide bridges between different social networks**, exposing individuals to novel ideas, resources, and opportunities outside their immediate circle.
- **Centrality & Power:** Nodes with high centrality are often considered **influential or powerful** within the network, as they have greater access to information, control over communication flows, and potential for brokerage or mediation between disconnected groups.

***“Serendipity”***

Everything Else and What It Means for  
Business, Science, and Everyday Life

Linked

"Remarkable.... A sweeping look at a new and exciting science." —*Science*

Albert-László Barabási

# At last

So “ties”, is not only a research topic  
but also an angle to view the world  
which can guides our life trajectory, hapiness(robust social network),  
also can learn to use the “**ties**” to reach our goal !

***END***  
***Thanks : )***
