

Platform Capabilities

INF 251

Jamie Lee

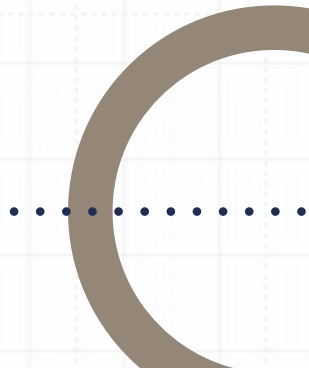

Today's Goals

- Articulate what the terms “platform capabilities” and “social-technical gap” mean
- Explain how the social-technical gap has changed, especially with the rise of social media

**What does “platform capabilities” mean?
Any examples?**

Platform capabilities are the features, functions, or abilities that a platform provides to its users.

Also referred to as “technical capabilities.”

For social media, examples include posting content, commenting, and messaging.

The Intellectual Challenge of CSCW: The Gap Between Social Requirements and Technical Feasibility

Mark Ackerman (2000)

Overview

- CSCW work has found that human activity is highly flexible, nuanced, and contextualized
- Thus, technologies should also be flexible, nuanced, and contextualized
- Ackerman argues that there is a gap between these two, called the social-technical gap
- Goal of CSCW is understand and approach this gap

History

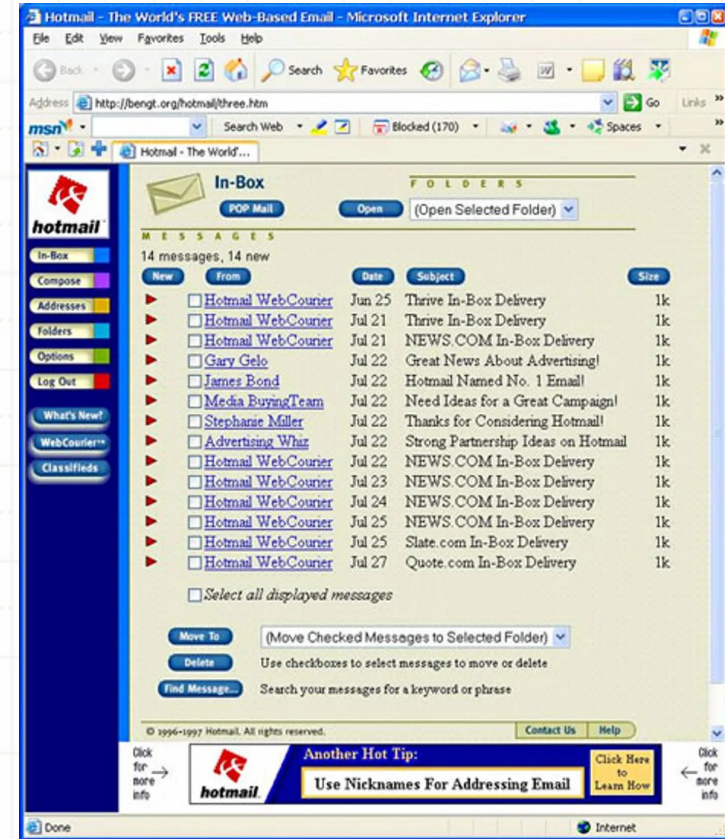

- CSCW coined in 1984 by Irene Greif and Paul Cashman
- Collaboration through technology was NEW!
- E.g. email, inventory control systems, collaborative writing applications, work organizational systems

History

- CSCW coined in 1984 by Irene Greif and Paul Cashman
- Collaboration through technology was NEW!
- E.g. email, inventory control systems, collaborative writing applications, work organizational systems

Question: What were some of the “new” platform capabilities of this era?

CSCW Assumptions

“Social activity is fluid and nuanced, and this makes systems technically difficult to construct properly and often awkward to use”

“People not only adapt their systems, they adapt their systems to their needs.”

“With an insufficient number of users, people will not use a CSCW system. This has been found in email, synchronous communication, and calendar systems.”

CSCW Assumptions

“Social activity is fluid and nuanced, and this makes systems technically difficult to construct properly and often awkward to use”

“People not only adapt their systems, they adapt their systems to their needs.”

“With an insufficient number of users, people will not use a CSCW system. This has been found in email, synchronous communication, and calendar systems.”

Discuss! Do the assumptions still hold true today? How have they changed or stayed the same?

Social-Technical Gap

“The divide between what we know we must support socially and what we can support technically” – Ackerman

Platform for Privacy Preferences Project (P3P): how people manage private information regarding other people, companies, and institutions

Social-Technical Gap

“There are no current HCI mechanisms to straightforwardly mechanize the naturally occurring, everyday social activity of handling personal information in its entirety.”

Social-Technical Gap

“There are no current HCI mechanisms to straightforwardly mechanize the naturally occurring, everyday social activity of handling personal information in its entirety.”

**Question: 20 years later, are there any HCI mechanisms that can do this?
Any that are close?**

Arguments against the significance of gap

Argument 1: Gap resulted from ignorance of designers and researchers.

Ackerman: Prior work has shown that designers and researchers are aware of the gap

Arguments against the significance of gap

Argument 2: Gap will be solved by new technologies or techniques

Ackerman: Unlikely because “computer science, AI, IT, and information science have attempted to bridge the gap without success for at least 20 years”

Arguments against the significance of gap

Argument 2: Gap will be solved by new technologies or techniques

Ackerman: Unlikely because “computer science, AI, IT, and information science have attempted to bridge the gap without success for at least 20 years”

Question: Do you agree or disagree with Ackerman’s statement here? Why or why not?

Arguments against the significance of gap

Argument 3: Gap is a historical circumstance and we will adapt to the gap

Ackerman: Our culture will adapt to any technology, but “a central promise of HCI is that we should not force users to adapt.”

Platform incapacibilities

Issues of technology that causes social-technology gap:

- Systems do not allow sufficient nuance (e.g. need context)
- Systems are not socially flexible (e.g. people do not switch roles explicitly)
- Systems do not allow sufficient ambiguity (e.g. people are inherently ambiguous)

Platform incapacabilities

Issues of technology that causes social-technology gap:

- Systems do not allow sufficient nuance (e.g. need context)
- Systems are not socially flexible (e.g. people do not switch states explicitly)
- Systems do not allow sufficient ambiguity (e.g. people are inherently ambiguous)

Question: Do social media systems have these issues?

Ackerman's Solution: Simon

- "Engineering and design are fundamentally different from the sciences"
- Artificial vs Natural
- Science is studying natural; engineering is creation of artificial

CSCW = engineering systems for groups of people

CSCW = social science studying the construction of the everyday experience

Implications

CSCW researchers need to understand the social-technical gap in order to contribute usable, effective systems

CSCW systems need to reflect how people really work and live in groups

Discuss! Seeing how much we have advanced in platform capabilities, are we closer to closing the social-technical gap? Why or why not?

Form-From: A Design Space of Social Media Systems

Amy Zhang, Michael Bernstein, David Karger, Mark Ackerman
(2024)

Overview

- Goal was to “characterize and distill a concise design space of social media systems”
- Form-From model
- Used model to trace history of social media systems

Social Media Systems

Systems that directly facilitate the sharing of user generated content between users.

E.g. Facebook, Twitter, Reddit, WhatsApp, Zoom, email, Slack

Different from Carr & Hayes (masspersonal is not a requirement)

Design Space

Range of possible design options available for a system

Simon: “design is a search through problem space”

Schön: design space = possibilities, opportunities, inspiration

The paper takes a Simonian view.

SPACE

Grudin's (1994) Time and Space Categorization

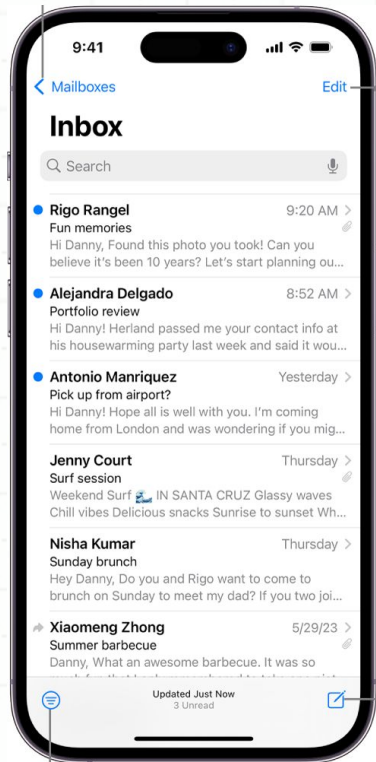

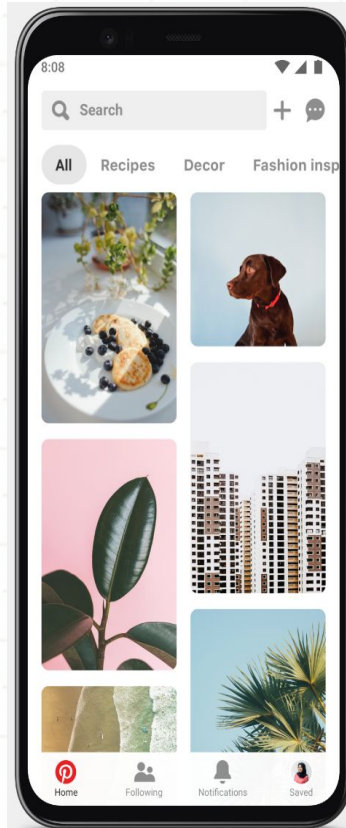

Form-From: A Model of Social Media Designs

Form

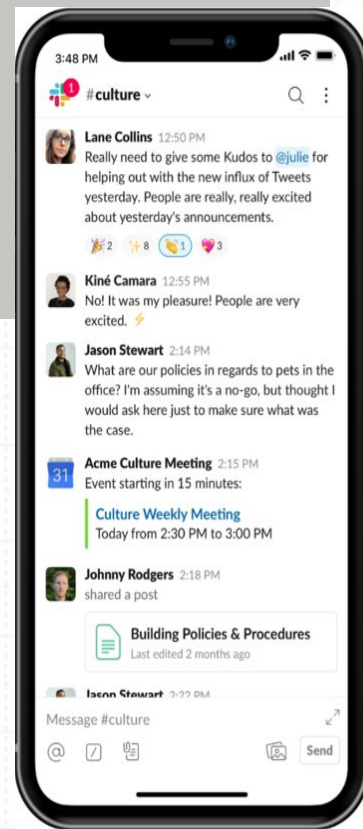

- How content is organized
 - Threaded: explicitly linking posts to each other
 - E.g. Twitter, Threads, YouTube, TikTok, Reddit
 - Flat: not focusing on linking posts together, instead focusing on interaction with overall stream
 - E.g. traditional chatrooms, instant messaging, old Facebook/Myspace, video livestream on Zoom, Instagram Stories, Snapchat

Threaded: **explicitly** linking posts to each other

Flat: interaction with overall stream

Form-From: A Model of Social Media Designs

From

- Process by which content is delivered
 - Spaces: shared space (e.g. channel, group chat)
 - Network: shared to accounts that have connected (e.g. Facebook, Twitter)
 - Commons: shared to entire platform (e.g. TikTok, Pinterest)

FORM

Flat

Emphasizes posting
without explicit links to
other posts

IRC
BBS (early)
Slack
Discord
Clubhouse

Threaded

Emphasizes posting
with explicit links to
other posts, e.g., by replies

Email
FidoNet
4chan
Reddit
Quora

Spaces

Shared in a distinct
space with a unique
location (e.g., channel)

Network

Shared to accounts
that have connected
(e.g., followers)

Commons

Shared to the entire
platform (e.g., For You)

FROM

A solid tan vertical bar is located on the left side of the slide.

**The full model has 62 dimensions.
What are your thoughts on the
complexity of the model? Does it
accurately capture social media or is
it trying to take on something too big?**

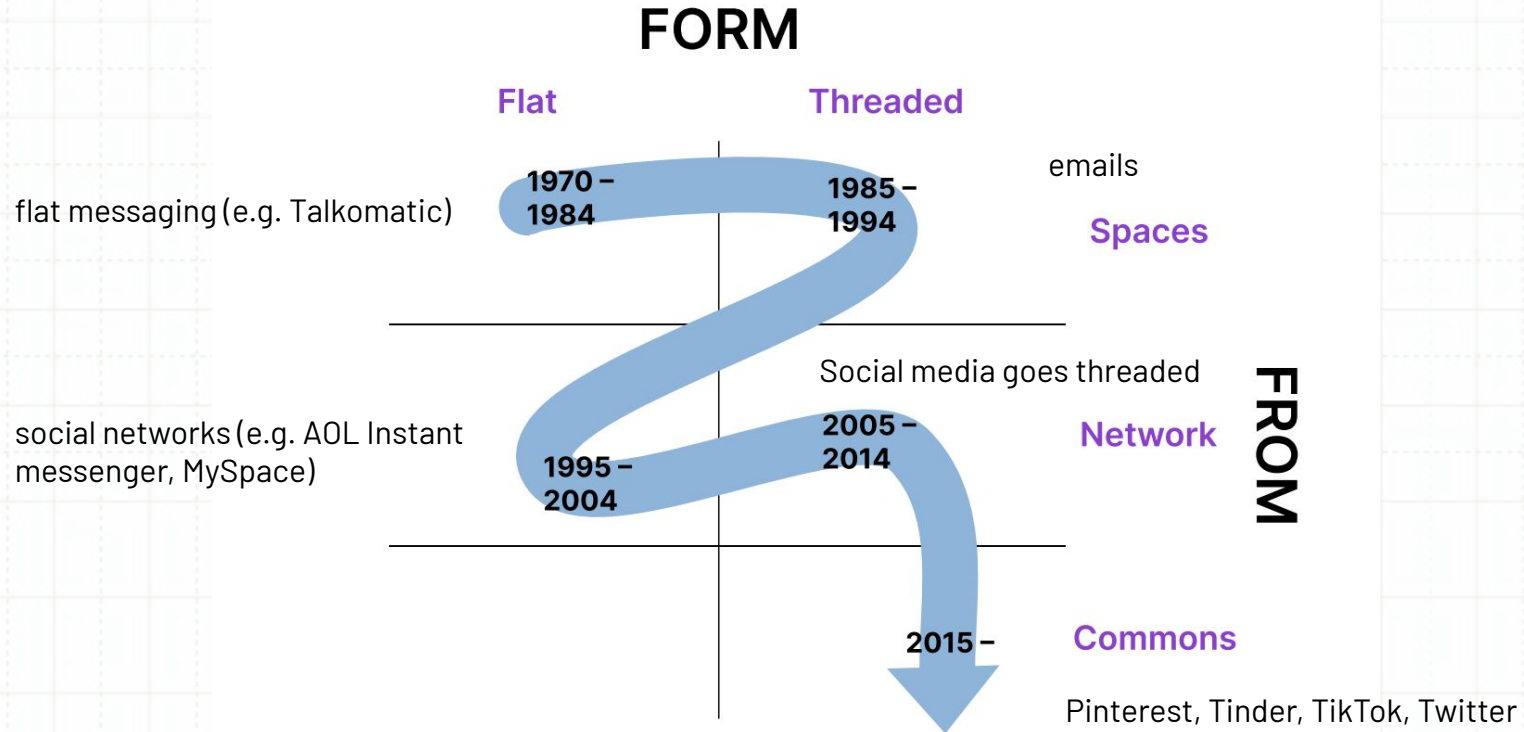

A decorative graphic in the bottom right corner consisting of a thick brown arc and a horizontal row of small blue dots.

A vertical bar with a light blue gradient, located on the left side of the slide.

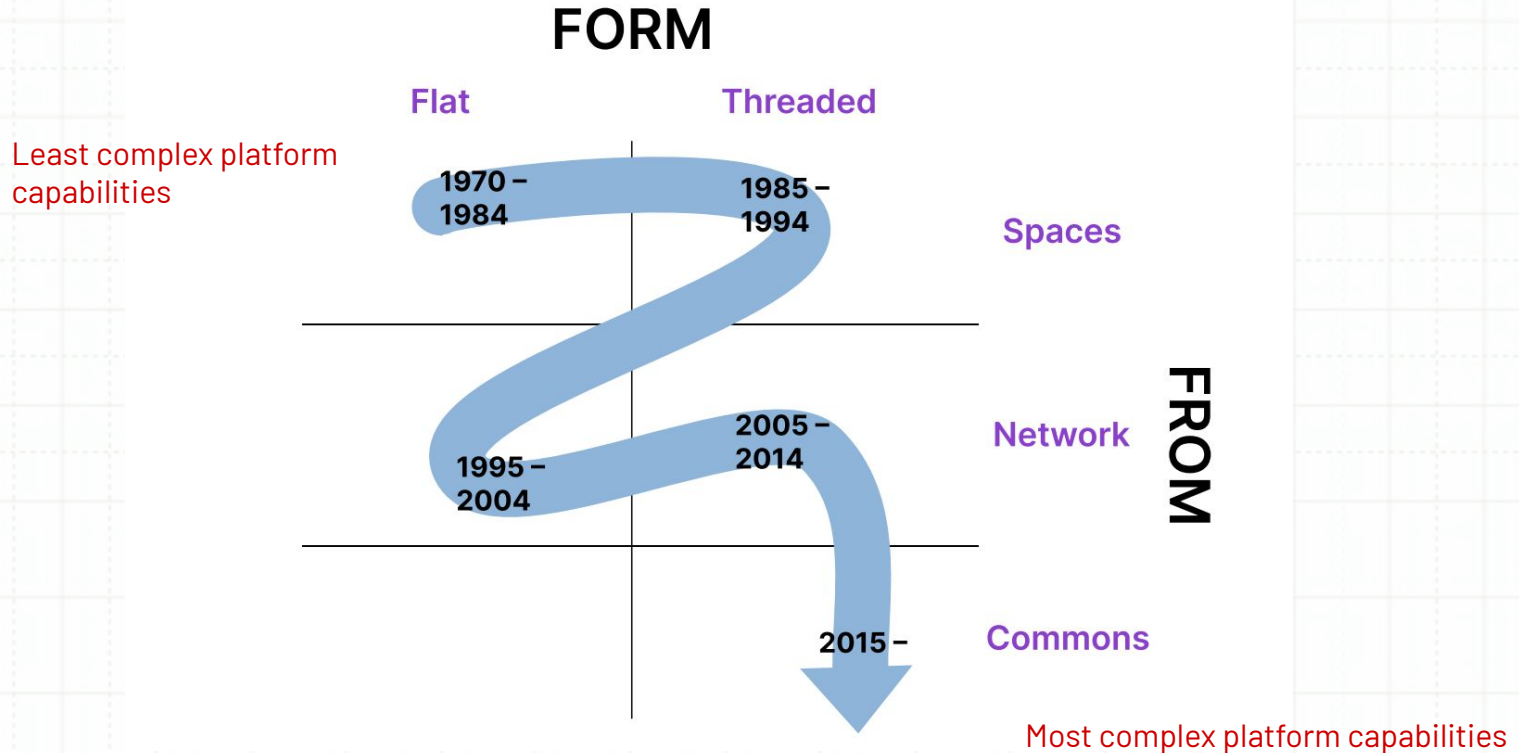

**Follow up question:
What are the limitations of this
model?**

Evolution of Social Media

Evolution of Social Media

Implications

Practitioners and designers to find design inspiration and explore alternatives using this model

“If we don’t design with intent, we default.”

**Any questions or ideas to further
discuss?**

Thank you!
